

Subject: Quick intro – Annie (Quant Intern) & benchmark dashboard update

Hi everyone,

I'm Annie, a quant intern currently rotating on the exotic trading desk (NY). Over the past few weeks, I've been working on a standalone dashboard that generates the daily morning email comparing TD vs Totem across IV, dividend, and forward.

The dashboard now supports custom tenor/strike bucketing and switchable diff modes (mean/median). I'm currently working on merging this into the GED Manager and upgrading the existing benchmark section.

You've probably seen the daily email – that's generated from this dashboard. If you have any feedback, feature ideas, or would like a quick walkthrough, feel free to reach out. Would love to hear how it can better support your workflow.

Here's the link to the current version if you'd like to check it out:

<https://dashboard.td.com/dash/GEDManager-New/>

Thanks,
Annie
