

Hi team,

I'm Annie, a quant intern currently rotating on GED (NY). One of my projects this summer has been upgrading the GED Manager dashboard — you can check out the latest version here:

- <https://dashboard.td.com/dash/GEDManager-New/>

The main update is a new interactive Summary Table under the Benchmark section (within the IV, Dividend, and Forward tabs). It displays the (TD – Totem Consensus) differences across all tickers, sorted by absolute value. You can customize the view by:

- Selecting different tenor and strike buckets based on your focus to view the corresponding differences
- Choosing how the difference is calculated (mean / median / max / min)

The table is fully interactive: clicking on any row will automatically search for the selected ticker and display the corresponding TD vs. Totem Benchmark Plot below, enabling quick visual inspection of discrepancies.

In addition, I've built an automated morning email that pulls from this summary table and flags tickers exceeding specific thresholds:

- IV (> 0.5 vol pts), Dividend ($> 0.5\%$), Forward ($> 0.5\%$)

If you have any feedback, feature ideas, or would like a quick walkthrough, feel free to reach out — I'd love to hear how it can better support your workflow.

Thanks,
Annie
